

ABSTRACT

Draining unit and press including such units

5

The invention concerns a draining unit for a press or maceration vat and a press including such units.

A draining unit particularly for a pneumatic press, comprising at least one elongated, profiled element (1) containing a plurality of spread-out holes (2), said element (1) extending along the internal wall (3) of the vat of the press and forming a drainage channel (4) together with the wall through contact at two longitudinal side edges, characterised in that the profiled element (1) is interlocked with said wall (3) at one (5) of its side edges (5,5') by means of a connection (6) with an ability to pivot and to hold in the pivoted position, and is provided with at least one latching means (7,7') adapted to lock said profiled element (1) movably in a position with its two side edges (5,5') resting against said internal wall (3) so as to form the drainage channel (4).
